THE MODERN FAIRY TALE

In the past, it has been the farmer's job to raise food and the raw materials for clothing. This, in the future is likely to remain his chief responsibility. But today chemical engineers and research savants are said to be giving these objectives a new and more profitable direction. Recent pamphlets issued by the North-West Line Elevators Association point out that the farm of today is rapidly becoming a source of raw material for big industry.

Local Wheat Situation

Another 5 bu. quota arrived in town Tuesday evening. Although the supply of wheat around Champion and district is still plentiful storage facilities in the elevators is somewhat depleted.

The Pool National and the U.G.G. are now unable to take in any more although the National is awaiting another annex all expect to be full to capacity in the very near future.

Soil Mining
At the Annual Conference of the Manitoba Agronomists an interesting and challenging paper was presented by M. J. Tinline and H. J. Siemens. Its title is "Changes and Readjustments in Manitoba Cropping Practices," but it has equal significance for residents of Saskatchewan and Alberta. The following is an abstract of the authors' introductory statements:

In view of the present wheat problem, this is an opportune time to encourage seeding down grasses and legumes.

Manitoba farmers have been grain mining their soil too long. Older countries have had to maintain a high percentage of their land in grasses and legumes in order to protect their soils. Manitoba farmers must follow this same policy or their soils will be ruined. Serious drifting over much of the province, sheet erosion and gullying of the undulating lands are only foretastes of more severe erosion yet to come.

Here endeth the quotation.

It is an interesting fact that, until quite recently, lectures and articles on crop rotations were considered to be of academic interest only. We believed that our prairie province soils were so abundantly fertile that they would never wear out. Now, we know better.

Vitamin B₁

Much publicity has recently been afforded vitamin B₁ as a stimulator of plant growth. Dr. E. J. Kraus, of the University of Chicago, in an address before a joint meeting of the American Society of Agronomy and the Soil Science Society of America, on December 5, stated that most of the publicity was "just plain bunk."

I Pledge

"I realize that Canada now calls on me . . . to join in a great National Savings Plan . . . necessary to win the war and vital to my own safety.

-that the gallant men of the Army, Navy and Air Force . . . now on the fighting front . . . need me on the financial front. They need munitions, material and equipment . . . and only by my money which represents the production of war materials can this support be secured. They are my protectors. They call on me to be their provider.

-that this will require hard work and many dollars.

-that only by hard work and frugal living . . . by LENDING all I can to Canada . . . can I do my part to help to win the war and establish our future security.

I Pledge— that I will forego the purchase of unnecessary articles . . . however small the cost . . . no matter how well I am able to pay for them . . . which take labour and materials away from the great task of providing goods needed to win the war.

-that NOW . . . starting this month . . . I will put a definite part of my income aside in War Savings Certificates. I will have it deducted regularly . . . each week . . . each month . . . either from my pay envelope or from my savings account, by arrangement with my employer or my bank manager."
